

Hunterdon Medical Center
Flemington, NJ

Cancer Center & Endoscopy

“The interior design of this addition was developed to provide an ambience that is comforting and relaxing for patients and their families.”

The Hunterdon Cancer Center is a two-story addition on the ground floor at the front of the facility. It contains an expanded Endoscopy and Operating Room Suite on the second floor.

This addition creates a distinct identity for the Cancer Center while providing ease of access for the public and internal connections to the rest of the hospital. While at the same time reinforcing and complimenting the existing façade and main entrance of the facility.

The interior design of this addition was developed to provide an ambience that is comforting and relaxing for patients and their families.

In addition to designing this new Cancer Center for the hospital, Buckl Architects has provided Hunterdon Medical Center additional comprehensive architectural services over the years that include renovations and new construction to a solarium and MRI suite.
