

Medical Office Building

“...convenient “close to the building” parking that supports the small business atmosphere while still providing an opportunity for multiple larger tenants.”

Currently in the design development stage, this 26,800 sf Medical Office Building will be the new home office location for the owners Hematology practice. Situated prominently on Route 248, the building will provide first class office space to the local healthcare community.

The building will be constructed of brick and non-reflective glass, allowing it to compliment both the surround businesses as well respect the nearby residential mix. The site design provides convenient “close to the building” parking that supports the small business atmosphere while still providing an opportunity for multiple larger tenants. Expected to be complete in the Fall of 2007.

Project Team

- Buckl Architects
- OTT Consulting, Inc.
- Northeast Engineering
- Lehigh Valley Engineering

Project Area

26,800 sf

Completion Date

Fall 2007
