With the construction of the Heart Hospital, Morristown Memorial was committed to providing a patient experience that was reflective of the high quality of care provided and the upscale nature of the surrounding community.

The Cardiac Access and Cath Prep / Recovery Unit are the first clinical units that most of their patients experience during their stay at the hospital, so it was imperative to provide an atmosphere that was consistent with the overall goals of the project. By designing pods of four private rooms with a toilet/shower room, a staff efficient layout was developed that provided a high sense of quality and privacy to the patient, but allowed for close monitoring of the patients by the staff.

The use of painted moldings and strong 'spa-like' finishes provides a very relaxed feel to the unit, and starts the patient experience with a strong first impression that results in a sense of confidence in the care that will be provided by the hospital.
